Jameson Bagain

Full-Stack Software Engineer — TypeScript · React · Node · AWS Serverless

Summary

Full-stack engineer with 8 years in web product work, the last 4 building ClientWindow — a multi-tenant SaaS platform for business messaging across WhatsApp, WeChat, SMS, Email, Teams and Slack. Work spans its GraphQL API, React SPA, mobile apps and the AWS serverless infrastructure underneath, from greenfield features to production incidents on live tenant data.

Technical skills

- **Languages** — TypeScript, JavaScript, SQL, HTML, CSS
- **Backend** — Node.js, Express, Apollo GraphQL (Nexus), Prisma, PostgreSQL, DynamoDB
- **Frontend & mobile** — React 18, Redux Toolkit, React Query, Vite, Capacitor (iOS + Android)
- **AWS** — SST/CDK, Lambda, SQS, Cognito, S3, SES, API Gateway WebSockets, CloudWatch
- **Integrations** — WhatsApp (Sunshine Conversations), Microsoft Teams, Slack, Outlook and Gmail add-ins, Mailgun, Segment
- **Practices** — multi-tenant data isolation, RBAC, structured logging, production incident triage

Experience

Software Engineer — ClientWindow

Jun 2022 – present · Remote

One of five engineers on a 9-app pnpm monorepo — Express + Apollo GraphQL API, React SPA, Capacitor mobile apps, email add-ins, AWS serverless on SST.

- Worked end-to-end across every layer — Prisma/PostgreSQL schema and GraphQL resolvers through to the React SPA, iOS and Android apps, Lambda workers and SST stacks.
- Implemented the ClientWindow app's authentication flows (login, sign-up and forgot password).
- Built the Slack integration from scratch: OAuth install, Block Kit App Home, per-participant DM notifications, KMS-encrypted token store and a background worker.
- Extended the Outlook add-in, then delivered the Gmail add-on, unifying both on one shared GraphQL layer.
- Added multiple document uploads to the WhatsApp channel (Sunshine Conversations), letting users send several files at once within a conversation.
- Implemented voice messaging on iOS, Android and the Outlook add-in, with inbound voice messages transcribed and shown as text on every plan using AWS Transcribe.
- Migrated the ClientWindow app to Microsoft Teams, so users can work with their client conversations without leaving Teams.
- Implemented ClientWindow's subscription feature, letting tenants sign up for and manage their plans, including upgrades, multi-currency billing and renewal handling.

Earlier experience

- **Software Application Engineer**, Accenture — Apr 2021 – Jun 2022
    - Worked across client teams: built a web learning platform that helps companies reskill employees, and a blockchain application for CP Group Thailand, defining requirements, building MUI components and fixing defects.
- **Front End Associate**, transcosmos Asia Philippines — May 2019 – Apr 2021
    - Helped maintain an online banking web app built with React and Redux, including validated forms for personal and bank details, and built responsive, SEO-friendly and accessible websites.
- **Frontend Web Developer**, StraightArrow (Creative Process Outsourcing) — Oct 2018 – Apr 2019
    - Used Marketo to set up and launch marketing-automation assets (emails, landing pages, forms, programs and segments), updated them from client feedback and troubleshot HTML.

Education

Bachelor of Science, Information Technology — University of Rizal System, Rizal State College, 2014–2018
